

You built the audience. We build the backend that keeps it alive.

ByteConnect is the edge layer between your education site and where readers buy — owned links, first-party attribution, deep-routing, and genuine separation. Built to be durable and compliant, never to deceive a platform or processor. Clean is what lasts.

WHAT'S COSTING YOU TODAY

- Naked ?ref= links platforms strip & scrapers harvest
- Readers hit the store's front door — conversions leak
- Zero data on which article actually earns
- One policy change from a dead merchant account

WHAT WE BUILD

Link integrity

Branded, deep-routed links you own — not raw affiliate URLs.

First-party attribution

Every buyer's path, article to checkout, in your own database.

Smart deep-routing

Readers land on the exact product for what they read, pre-tagged.

Separation architecture

Distinct infra per property — one flag can't take down both.

Compliance layer

RUO labeling, disclosure, access-path separation — durable, not deceptive.

Owner Console

Live revenue-per-article, members, and a link manager — yours.

Education site
your content

ByteConnect edge
links · attribution · routing

RUO supplier
exact product, disclosed

Two properties — never sharing a pixel, database, or visible link. Genuine separation, not concealment.

BUILT COMPLIANT

- ✓ Disclosed affiliate (rel="nofollow sponsored")
- ✓ Same page & destination for every visitor
- ✓ RUO labeling; education, supply & clinical kept separate
- ✓ Nothing hidden from any platform or processor

ENGAGEMENT

Deployment · property pair, ~1 week	\$8,500
Managed infrastructure · run it + console	\$2,000/mo
Advisory partner · hands-on growth	\$5,000/mo
Performance layer · attributed revenue	+2%

See it running on your stack in a week.

We stand up the whole edge layer on your accounts — you own the domain, the data, and the console.
